Wetpour

Rubber has excellent impact absorbing properties and is laid in situ, to various depths, for a seamless and colourful effect. The 'poured on' system enables a smooth finish where the original base may have been uneven. Base course rubber contains a proportion of recycled rubber and the system is porous allowing rainwater to drain away through existing means.

With a large range of colours and the ability to recreate any free formed design wetpour is a great choice for a stimulating and safe playground surface.

- ✓ Continuous, smooth finished surface
- ✓ Contains recycled content
- ✓ Wide range of colours
- ✓ Limitless design options
- ✓ Suitable for high level equipment
- ✓ Porous system
- ✓ Low maintenance
